SUMMARY

B.Tech Computer Science graduate (CGPA 8.69) from SR University, Warangal with Cisco CCNAv7 certification and strong computer networking fundamentals. Hands-on Python scripting experience through real project work, with AWS Academy certifications covering cloud automation concepts. Comfortable troubleshooting network-connected devices and systems. Seeking IoT Internship at LEEO TECK INDIA SOLUTIONS to apply networking, Python, and automation skills to integrate and troubleshoot IoT devices and systems.

PROJECT

LifeRoute – Networked System Integration and Automation

- Built a Python-based system integrating real-time location data from Google Maps API, applying networking concepts to manage device-to-server communication for a distributed hospital network.
- Configured network connectivity (TCP/IP, DNS, security groups) between application components hosted on AWS EC2, ensuring reliable communication across the system.
- Wrote Python automation scripts to handle routine data processing tasks and system health checks, reducing manual intervention.
- Troubleshot connectivity and integration issues between distributed system components, applying systematic networking diagnostics.
- Documented system architecture, network configuration, and troubleshooting procedures for future reference.

CCNAv7 Network Lab – Device Networking and Troubleshooting

- Configured and troubleshot networked device topologies including routing, switching, and connectivity diagnostics – directly transferable to IoT device networking and integration.

EDUCATION

B.Tech – Computer Science Engineering

SR University • Warangal, Telangana • 2022 – 2026 • 8.69

Diploma – Computer Engineering

VMR Polytechnic • Warangal • 2019 – 2022

CERTIFICATIONS

AWS Academy Cloud Foundations

Amazon Web Services

AWS Academy Web App Builder

Amazon Web Services

AWS Academy Data Pipeline Builder

Amazon Web Services

CCNAv7 Introduction to Networks

Cisco Networking Academy

Cybersecurity Essentials

Cisco Networking Academy

SKILLS

Computer Networking: TCP/IP, subnetting, DNS, DHCP, routing/switching, VLANs (Cisco CCNAv7)

Python: Scripting, automation, API integration, data handling for connected systems

Automation: Python and Bash-based automation scripts for device monitoring and routine tasks

Troubleshooting: Network connectivity diagnostics, device integration issues, systematic problem-solving

Cloud Concepts: AWS (EC2, S3, IAM) – cloud connectivity fundamentals relevant to IoT device management
