CAREER OBJECTIVE

B.Tech Computer Science Engineering graduate (Class of 2026, CGPA 8.69) from SR University, Warangal, with hands-on experience in SQL-based database design, Python development, and cloud infrastructure. Practical experience designing and querying MySQL databases to manage real-time operational data across distributed systems, including schema design for high-concurrency transaction handling. AWS Academy certified in Cloud Foundations, Web App Builder, and Data Pipeline Builder. Strong problem-solving and analytical thinking developed through independent, self-driven project work; comfortable navigating ambiguous tasks and learning new tools quickly, both independently and within a team. Seeking to begin a career in Data Analytics, applying SQL, Python, and data-driven problem-solving to real business questions.

TECHNICAL SKILLS

Data & Databases: SQL, MySQL database design and optimisation, schema design, query writing, data integrity in concurrent/transactional systems

Programming Languages: Python, SQL, PHP, HTML, CSS, Java, Bash

Cloud Computing (AWS): EC2, S3, IAM, VPC, RDS, Lambda, CloudWatch, CloudFormation, AWS CLI

Backend Development: Flask, REST API design

DevOps & Tools: Git, GitHub, GitHub Actions (CI/CD), Docker, Linux (Ubuntu) server administration

Networking: TCP/IP, DNS, DHCP, routing and switching, VLANs, subnetting, network security

Security: IAM least-privilege policies, network ACLs, firewall fundamentals, cybersecurity best practices

PROJECTS

LifeRoute – Smart Ambulance Traffic and Hospital Alert System

Python | Flask | MySQL | AWS EC2 | S3 | IAM | Google Maps API | 2025

- Designed and built a multi-endpoint Flask REST API to manage real-time ambulance dispatch and hospital alert workflows, coordinating operational data across a distributed hospital network.
- Designed a MySQL database schema to manage concurrent read/write operations for hospital status and dispatch logs, maintaining data accuracy and consistency across simultaneous updates.
- Integrated Google Maps API for real-time route calculation and traffic-based data analysis between hospitals and ambulances.
- Deployed the application on AWS EC2 with IAM security roles, S3 storage integration, and CloudWatch monitoring for reliability and data availability.
- Automated deployment steps using Bash scripts and set up a basic CI/CD workflow using GitHub Actions.

Medical Appointment Booking System

PHP | MySQL | HTML | CSS | Linux | 2024

- Built a full-stack web application for scheduling patient appointments with role-based access for patients, doctors, and administrators.
- Designed the database schema and implemented server-side logic to handle concurrent booking transactions while maintaining data integrity.

CCNAv7 Network Lab Simulations

Cisco Packet Tracer | TCP/IP | Routing | Switching | 2024–2025

- Configured enterprise network topologies including routing (OSPF, RIP), VLANs, ACLs, NAT, and DHCP; practiced systematic, evidence-based troubleshooting using diagnostic tools and commands.

EDUCATION

B.Tech – Computer Science Engineering | CGPA: 8.69 | Graduation Year: 2026

SR University, Warangal, Telangana | 2023 – 2026

Diploma – Computer Engineering | CGPA: 7.9

VMR Polytechnic, Warangal | 2020 – 2023

CERTIFICATIONS

- AWS Academy Data Pipeline Builder – Amazon Web Services
- AWS Academy Cloud Foundations – Amazon Web Services
- AWS Academy Web App Builder – Amazon Web Services
- CCNAv7 Introduction to Networks – Cisco Networking Academy
- Cybersecurity Essentials – Cisco Networking Academy
