CAREER OBJECTIVE

B.Tech Computer Science graduate (CGPA 8.69) from SR University, Warangal with full-stack ownership experience through LifeRoute - a production application spanning backend APIs, database design, cloud infrastructure, and frontend integration. Comfortable working across the stack: writing Python/Flask APIs, managing PostgreSQL/MySQL databases, debugging production issues, and using AI coding tools daily to move faster. AWS Academy certified with practical cloud deployment experience. Based in Warangal, Telangana - open to relocating to Hyderabad. Seeking Software Developer role at Vishwa.ai to own real problems end-to-end across product, backend, data, and infrastructure for an AI-native SaaS platform.

TECHNICAL SKILLS

Full-Stack Ownership: Backend APIs (Python/Flask), database design, frontend basics, end-to-end feature delivery

Backend Development: Python, Flask, REST API design, PostgreSQL/MySQL, SQL query optimisation

Cloud & Infrastructure: AWS (EC2, S3, IAM, VPC, CloudWatch) - deployment, debugging, and monitoring production issues

Debugging Across the Stack: Frontend, backend, infrastructure, and data layer troubleshooting with root cause analysis

AI-Assisted Development: Using AI coding tools daily to improve speed and output quality

Data-Heavy Product Logic: Designing schemas and queries for concurrent, real-time data processing (dispatch, alerts, routing)

Ownership Mindset: Taking features from idea to production, understanding user problems, making practical trade-offs

Version Control & Collaboration: Git, GitHub, working across ambiguity to ship functional, reliable solutions

PROJECTS

LifeRoute - End-to-End Ownership: Backend, Database, Infra, Debugging

Python | Flask | MySQL | AWS EC2 | S3 | IAM | Google Maps API | REST API | 2025

- Owned the LifeRoute problem end-to-end: understood the real-world need (emergency dispatch coordination), designed the solution, built it, and deployed it to production on AWS.
- Wrote backend APIs in Python/Flask handling real-time ambulance dispatch and hospital alert logic, and designed the MySQL schema to support concurrent, data-heavy operations.
- Debugged issues across the full stack: API logic errors, database connection failures, AWS infrastructure misconfigurations, and third-party API (Google Maps) integration problems.
- Used AI coding tools throughout development to scaffold code faster, debug issues, and improve overall code quality - directly matching the AI-assisted workflow this role expects.
- Made practical trade-offs between speed and quality under real constraints, prioritising features that delivered the most value to the emergency-response use case.
- Took the feature from initial idea through to a stable, working, deployed system - not just writing code, but owning the outcome.

Medical Appointment Booking System

PHP | MySQL | HTML | CSS | 2024

- Built a full-stack booking application end-to-end, from database design through frontend forms, understanding and solving the complete user problem rather than isolated components.

EDUCATION

B.Tech - Computer Science Engineering | CGPA: 8.69

SR University, Warangal, Telangana | 2022 - 2026

Diploma - Computer Engineering | 79%

VMR Polytechnic, Warangal | 2019 - 2022

CERTIFICATIONS

- AWS Academy Cloud Foundations - Amazon Web Services
- AWS Academy Web App Builder - Amazon Web Services
- AWS Academy Data Pipeline Builder - Amazon Web Services
- CCNAv7 Introduction to Networks - Cisco Networking Academy
- Cybersecurity Essentials - Cisco Networking Academy
