

Dear Hiring Team,

I am excited to apply for the Targeted Recruiting Specialist position at Labelbox. The opportunity to contribute to the infrastructure powering frontier AI development is highly motivating, and I am eager to bring my technical background, operational mindset, and strong execution skills to your Growth team.

I recently completed my Bachelor's degree in Computer Science and have built hands-on experience with cloud technologies, backend development, and automation through personal and academic projects. While my background is technical rather than traditional recruiting, I have developed the ability to organize workflows, solve complex problems systematically, analyze data, and continuously improve processes—skills that align closely with building and optimizing recruiting funnels.

Throughout my projects, I have learned the importance of ownership, attention to detail, and delivering results in fast-paced environments. I enjoy breaking down large problems into repeatable systems, identifying bottlenecks, and improving efficiency. These experiences have strengthened my ability to work independently, adapt quickly, and manage multiple priorities effectively.

What attracts me most to Labelbox is your focus on building the foundation for next-generation AI through high-quality data and scalable operations. I am particularly excited by the opportunity to improve sourcing workflows, monitor funnel performance, collaborate across teams, and help ensure qualified contributors successfully move from application to productive engagement.

In addition to my technical foundation in AWS, Python, JavaScript, React, Node.js, MongoDB, Git, and Linux, I am a fast learner who enjoys working with data, exploring new tools, and continuously improving operational processes. I communicate clearly, work well with cross-functional teams, and am committed to delivering measurable results.

I would welcome the opportunity to contribute to Labelbox's mission while growing alongside a team that values ownership, rapid execution, and continuous learning. Thank you for considering my application. I look forward to the opportunity to discuss how my skills and enthusiasm can contribute to your team.

Sincerely,

Mohammed Rizwan
